

Sistema litoral o costero

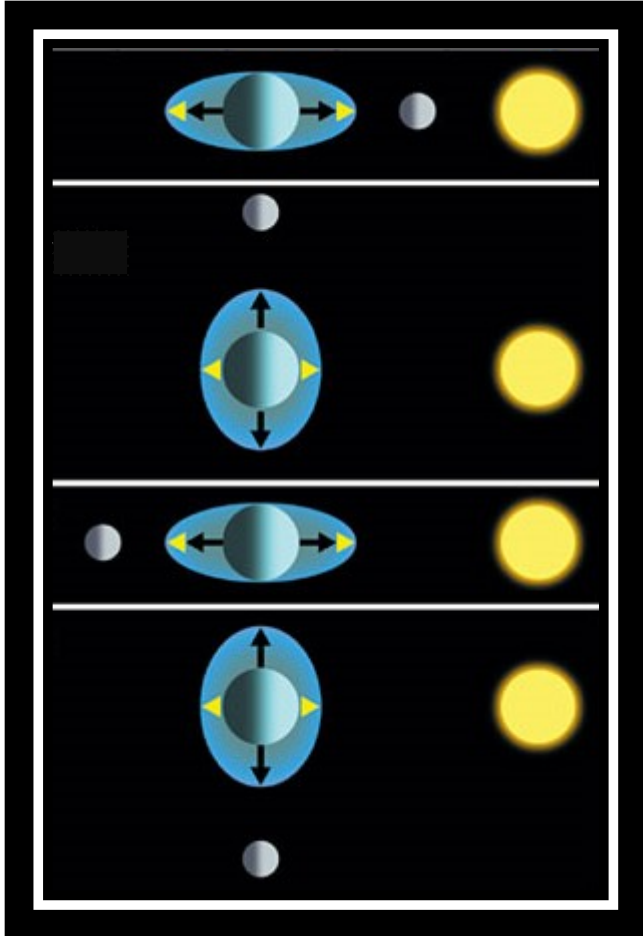

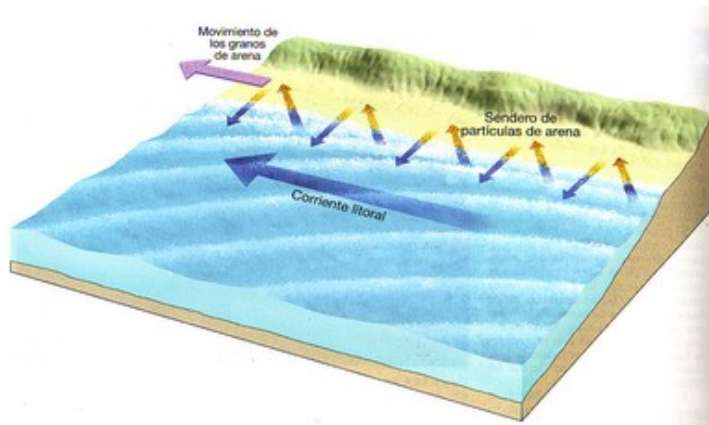

Acción costera: OLEAJE

Acción costera: MAREAS

Acción costera: CORRIENTES MARINAS

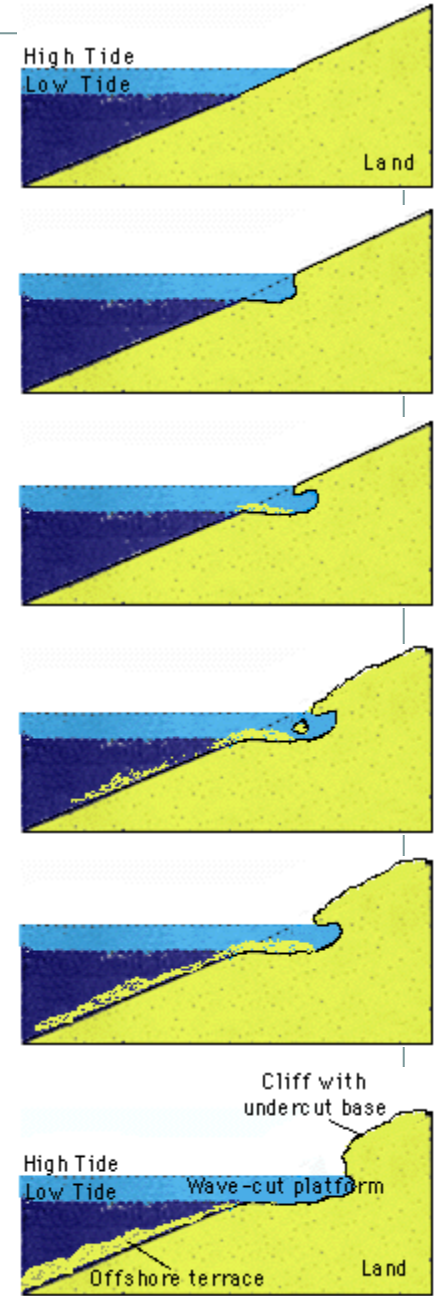

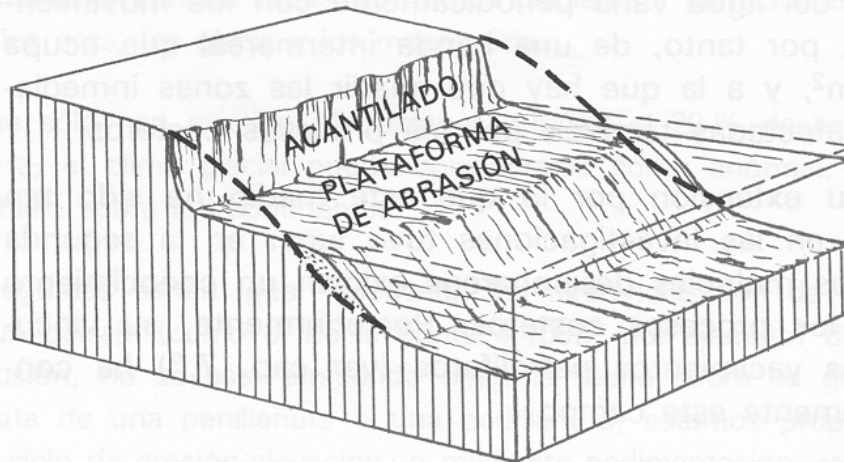

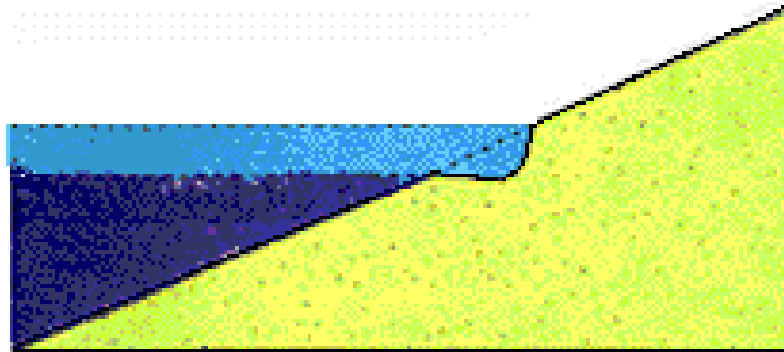

Acantilado

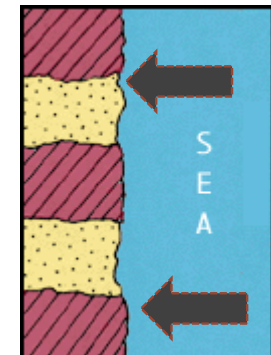

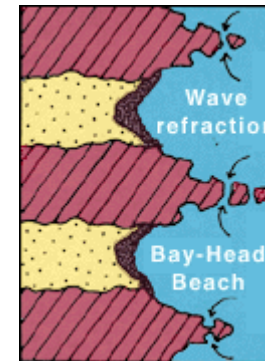

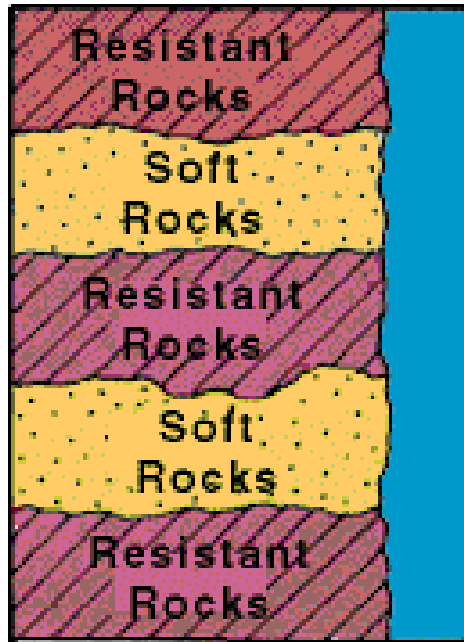

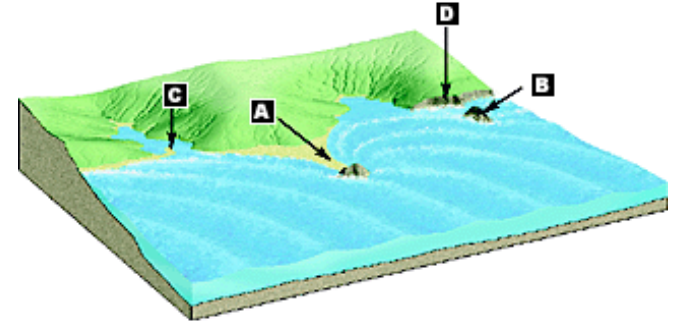

Plataforma de abrasión

Formas erosivas: acantilados y plataformas de abrasión

RETROCESO EROSIVO DE UNA COSTA

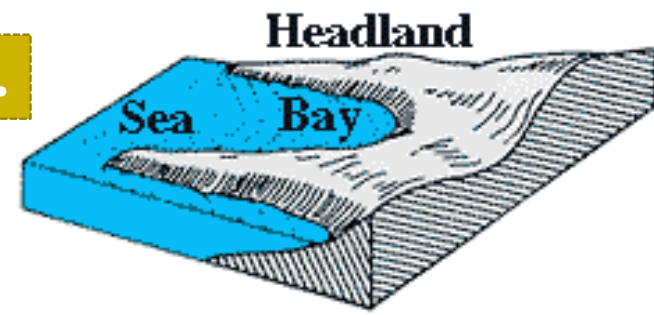

Formas erosivas

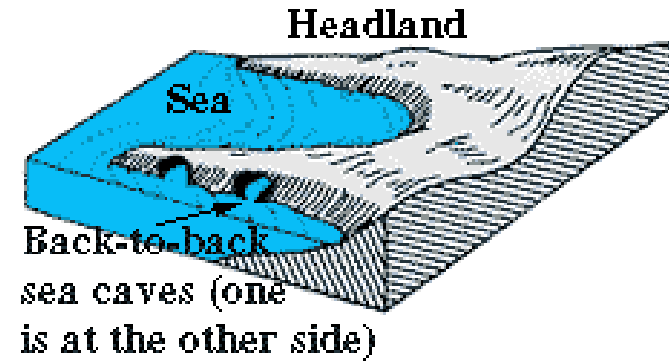

Formas erosivas: arcos, cuevas, pináculos,..

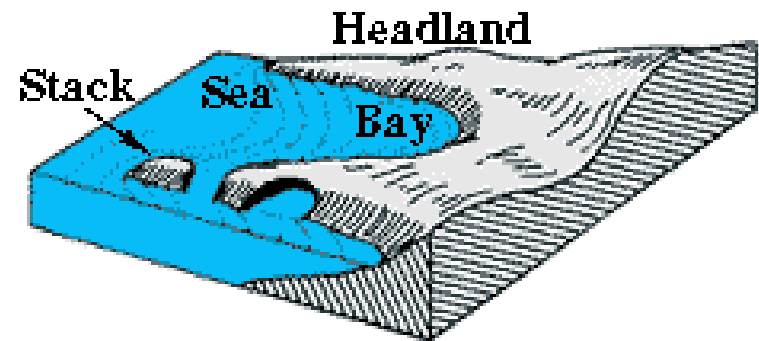

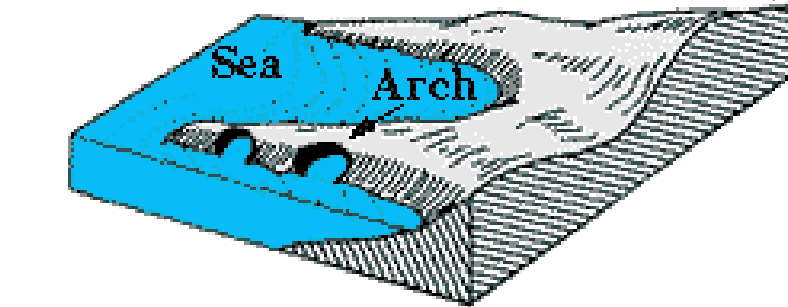

Cuevas

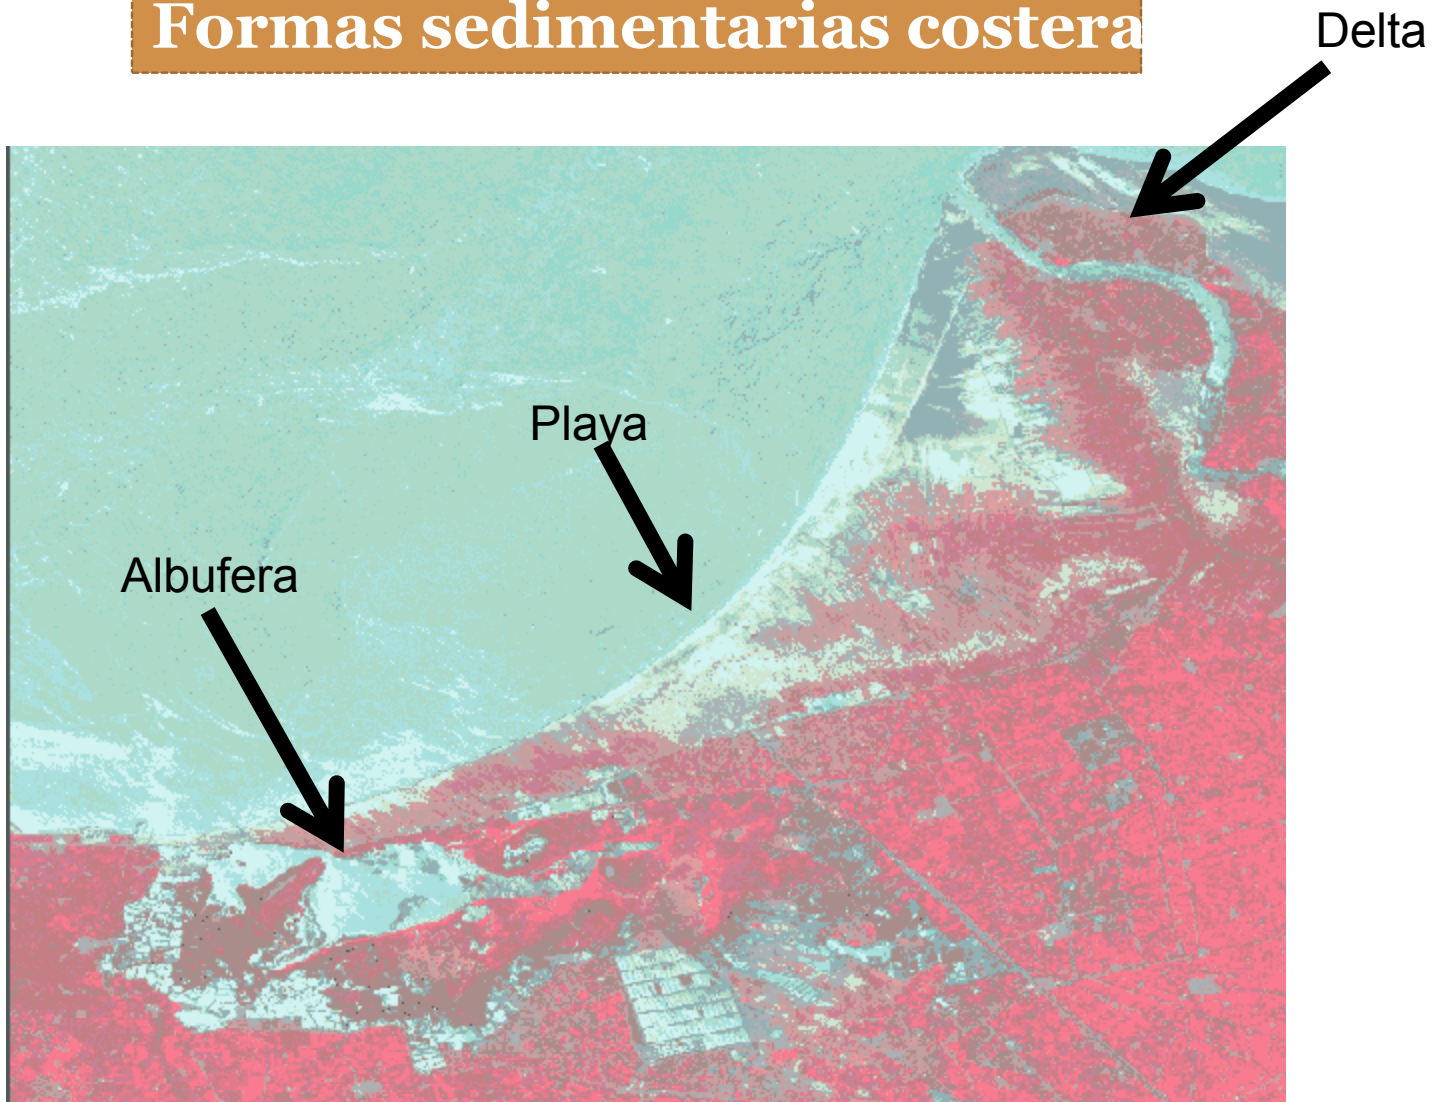

Arcos

Aguja o pináculo costero (stack)

Formas sedimentarias costera

Formas sedimentarias costeras

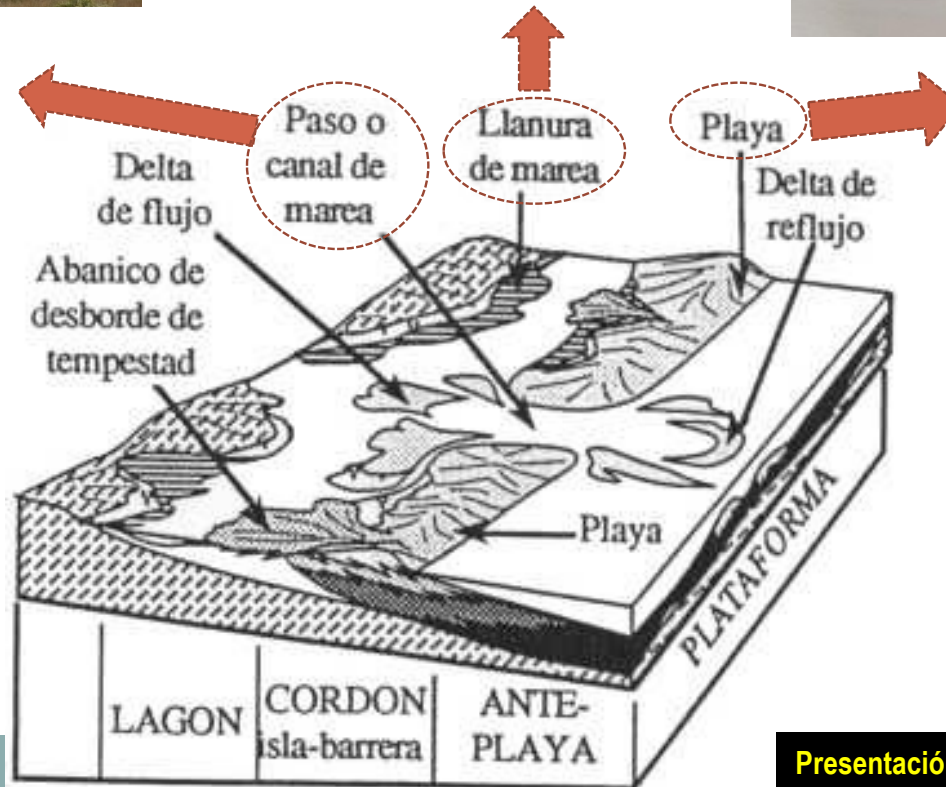

Canal de marea

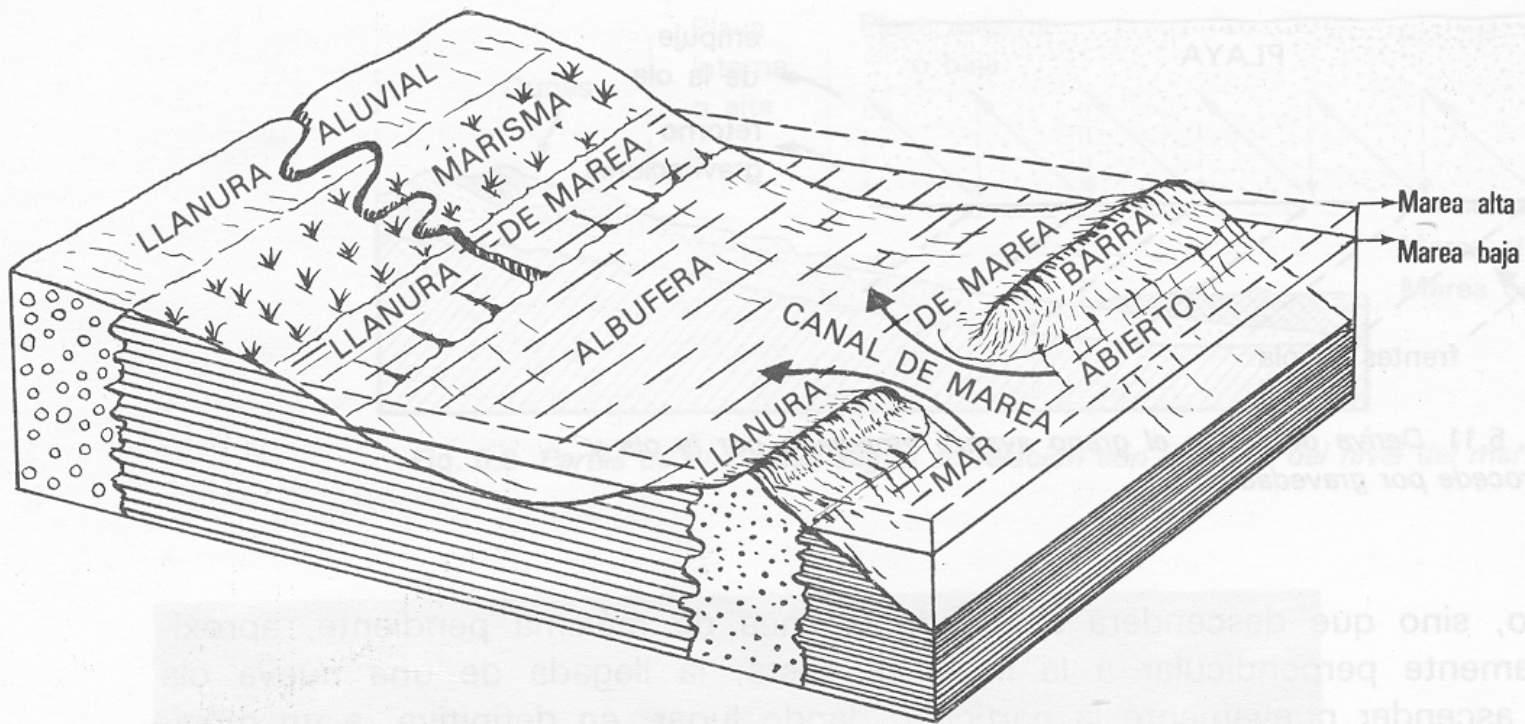

Llanura de marea

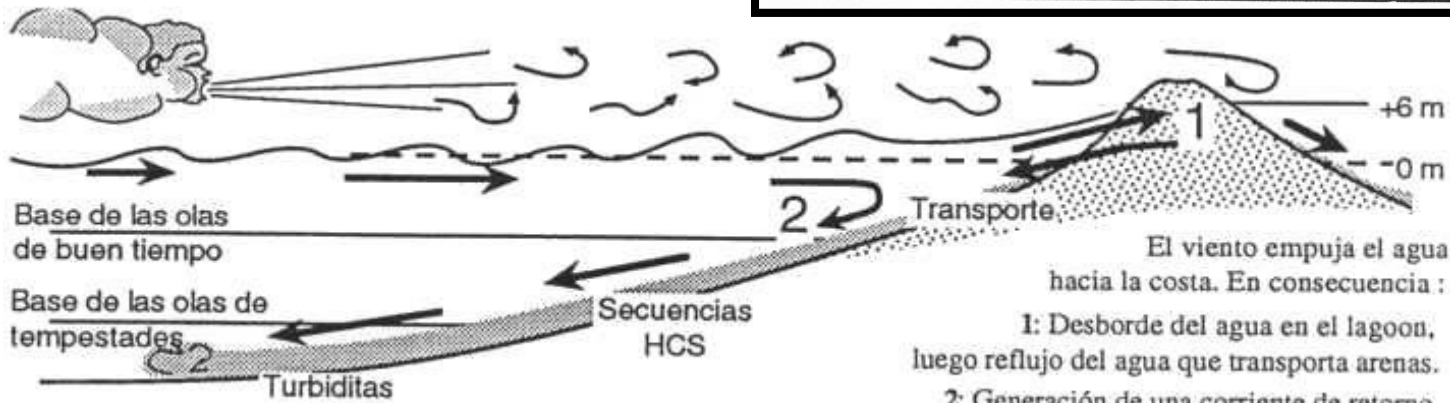

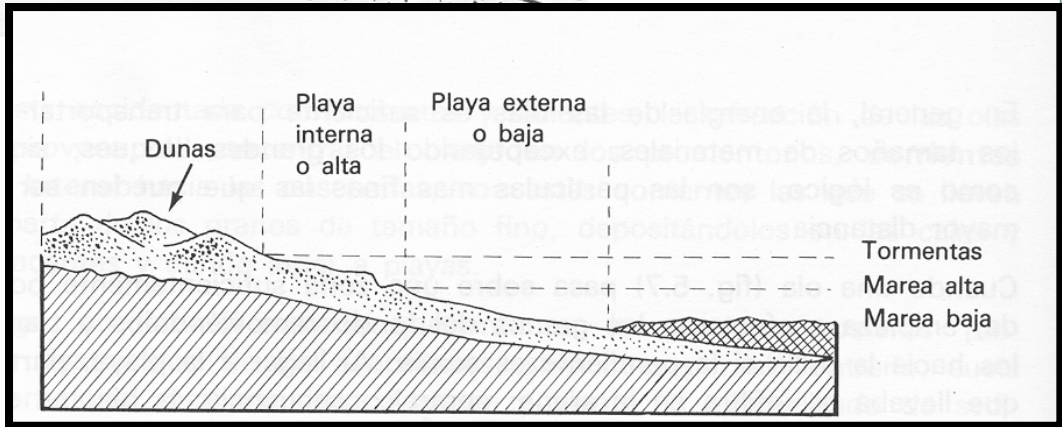

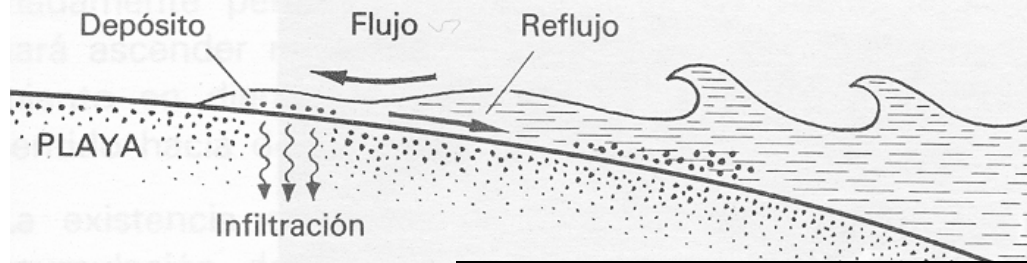

Playa

Formas sedimentarias: Sistema barra-albufera

Formas sedimentarias: Playas

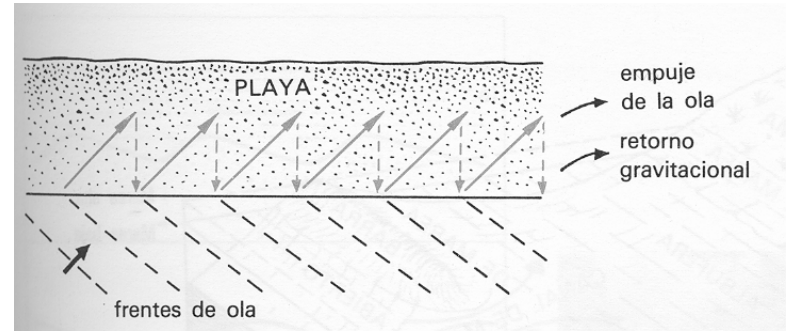

El viento empuja el agua hacia la costa. En consecuencia:

1: Desborde del agua en el lagoou, luego reflujo del agua que transporta arenas.

2: Generación de una corriente de retorno cargada de arenas a lo largo del fondo (-> turbiditas)

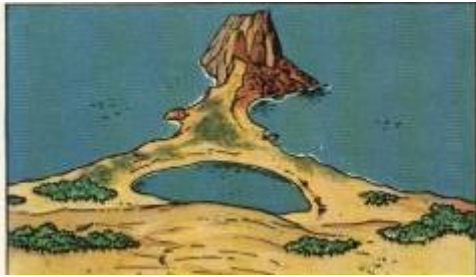

Barras y flechas por deriva costera

Formación de barras y flechas sedimentarias

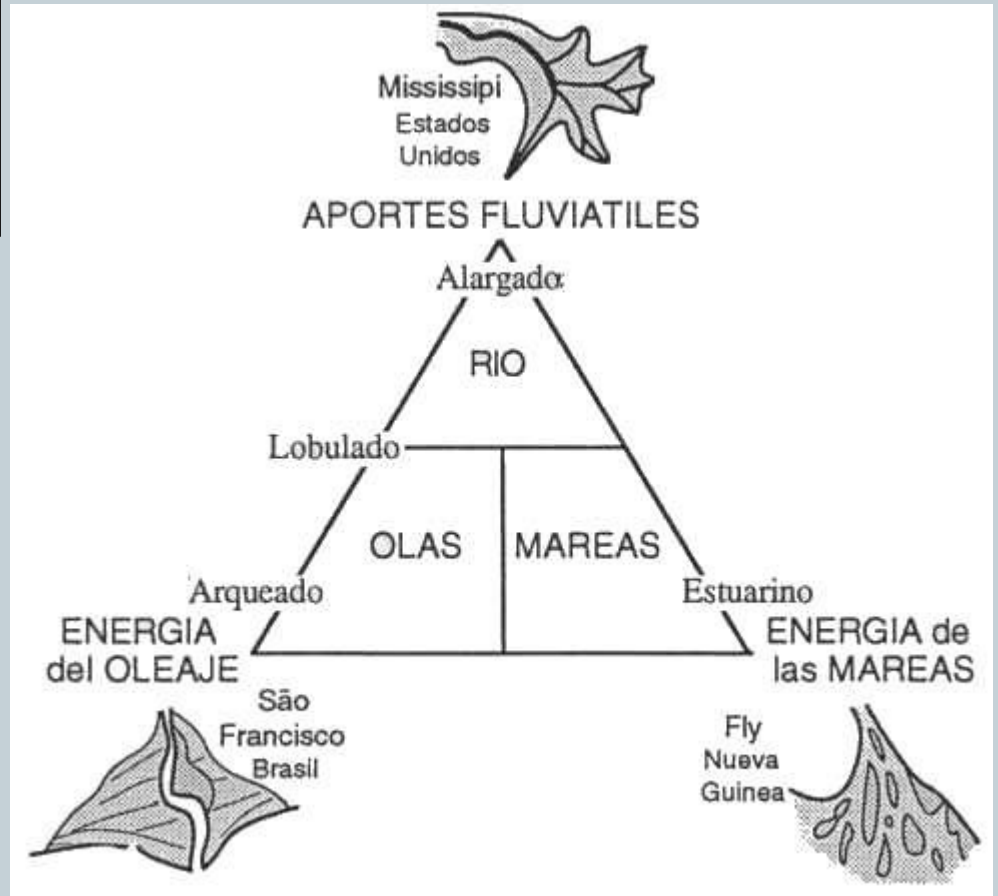

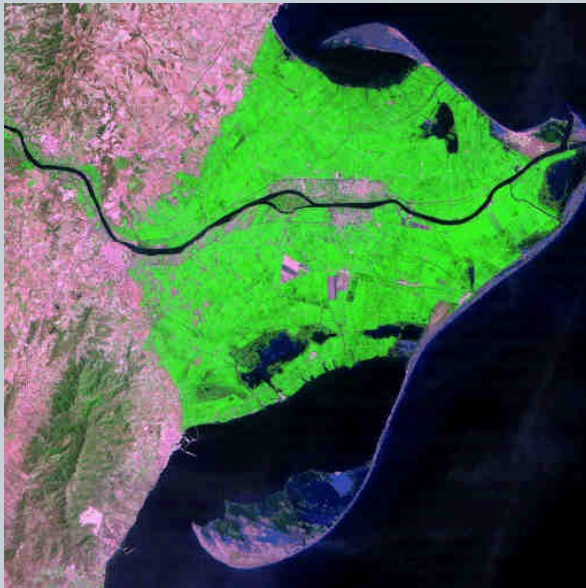

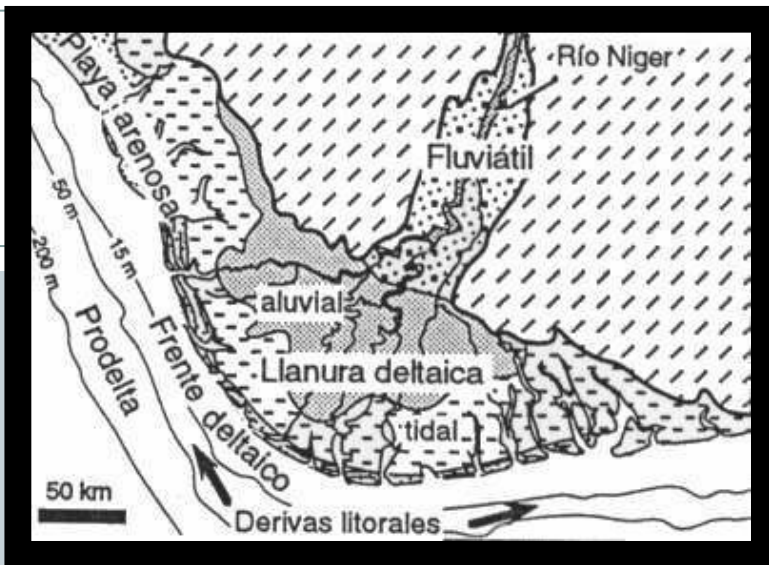

Formas sedimentarias: Tómbolo

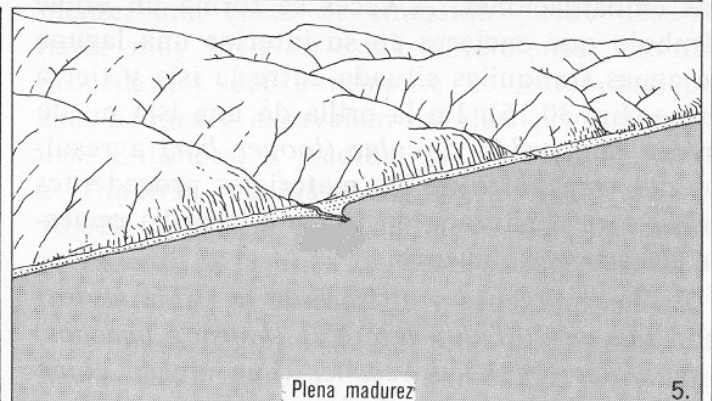

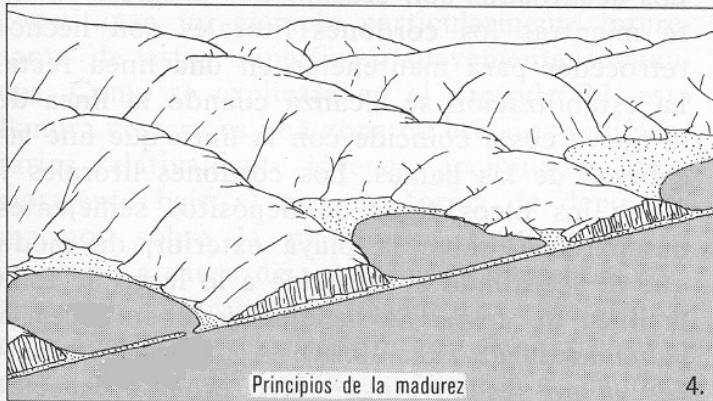

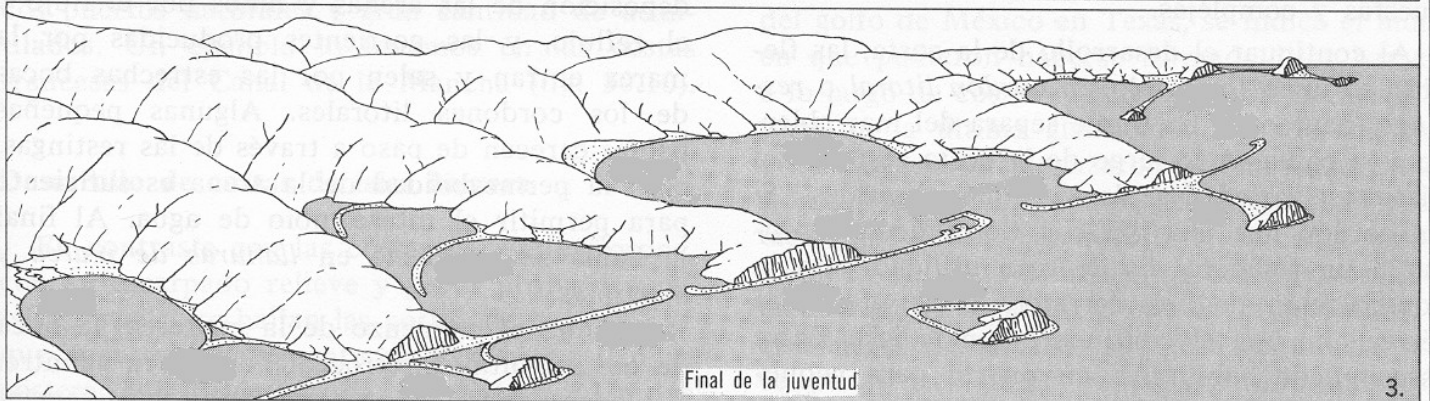

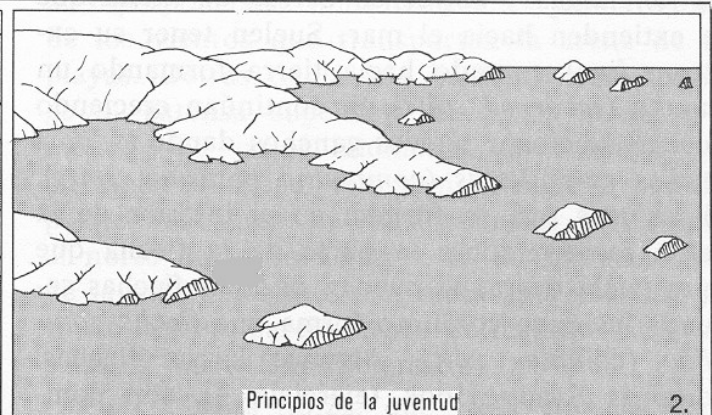

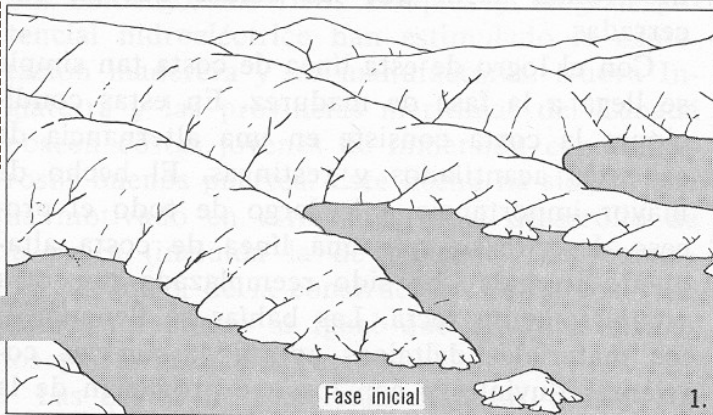

Peñón y tómbolo de Ifach

Formas sedimentarias: DELTA

Evolución costera

Evolución de costa calcárea
(formación de cuevas y calas)
